Materials	Keys	Nickel Silver 3.1mm Thick alloy 311
	Cylinder bodies	Brass
	Cylinder plugs	Brass
	Trap pins	Nickel Silver
	Trap springs	Stainless Steel.
Finish	Standard finish on cylinders is Satin Chrome Plate. Polished Brass and other architectural finishes are available on request.	
Products	Cylinders are available for most popular Australian locks.	

Designed and manufactured in Australia for the Master Locksmiths' Association of Australasia.

binary plus

Manipulation resistant plus registered key security

...is a unique patented locking system which gives you that extra level of security to protect you, your family, your home and your business.

Your key cannot be copied without authorisation.

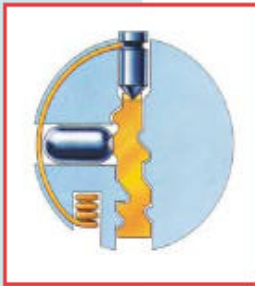

The Master Locksmiths' Association of Australasia is the owner of the patent for this unique Binary Plus system within Australia, New Zealand and internationally.

Only manufacturers who can meet the Association's standard of excellence are authorised to manufacture Binary Plus.

Only locksmiths who have met the Association's standard of excellence are licensed to deal with Binary Plus products and duplicate your keys.

Licensed Binary Plus locksmiths are bound by a legal agreement which only allows you, the registered key owner, to authorise duplication.

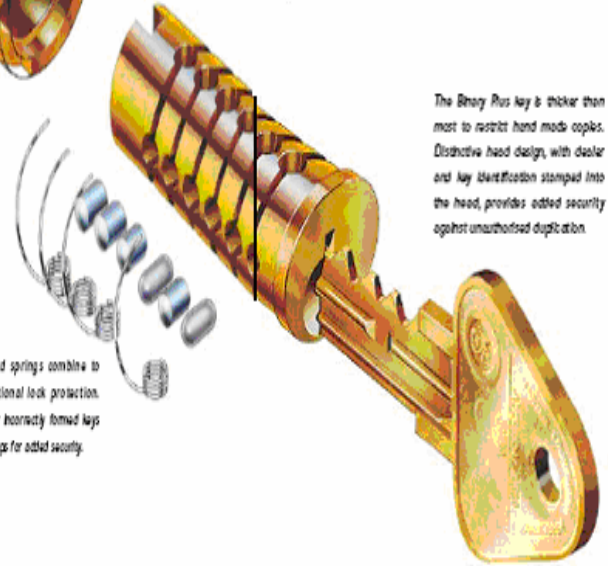

The Master Locksmith will only duplicate keys to systems for which he or she holds the owner's signature and records.

Binary Plus adds a new dimension to lock security with a patented side trap action. If the wrong key is used side pins engage with the lock shell and prevent the lock from opening.

Most locks use top pins and springs. The Binary Plus difference is that these pins will set in a locked position if lock manipulation is attempted or the wrong key is used. Traps can only be released with the correct key.

The Binary Plus key is thicker than most to restrict hand made copies. Distinctive head design, with dealer and key identification stamped into the head, provides added security against unauthorised duplication.

Side pins and springs combine to provide additional lock protection. Undersized or incorrectly formed keys will activate traps for added security.
