

EVVA at a glance

Founded in 1919 EVVA has grown at a rapid rate to become the third largest European key system manufacturer. EVVA are the first European cylinder manufacturer to become ISO9001 certified for quality in design and production. With more than 800 employees EVVA is a family owned and operated company based in Vienna Austria.

EVVA produces innovative keying systems of the highest quality with many years of experience in major European locksmith markets including the UK & Scandinavia which have a similar locksmith industry to Australia.

Corporate policy

People are always the focal point at EVVA, whether they are our customers, partners or our employees; personal needs and requirements are always considered. This motto dominates our attitudes and our working methods, every single day.

Our local Agents and Agreements

Throughout Australia we have 47 Agents with the EVVA DPS product covering all States and Territories including One agent in Auckland New Zealand.

All of these agents are qualified locksmiths whom are members of the Master Locksmiths Association of Australasia (MLAA), The Locksmiths Guild of Australia (LGA) or the Australian and New Zealand Locksmiths Association (ANZLA). They have all been trained in the keying and assembly of the EVVA DPS cylinders and code generation using Promaster5 or Keymastery key management programs.

All EVVA Agents use their own individual key profiles exclusive to them within their States or Territories. By doing this the control of keys accidentally operating various sites is dramatically reduced.

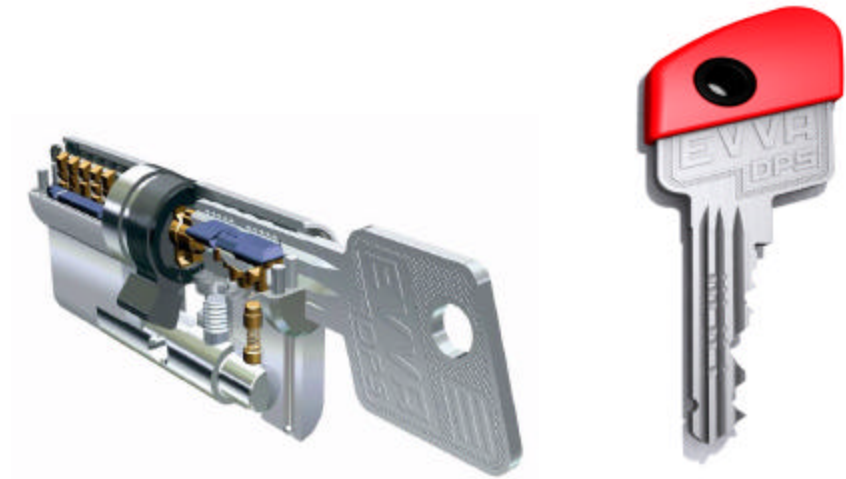

If an agent has the need for an exclusive profile or key broach under section 12.3 of the Dealers Licence Agreement an Agent may elect to sell a communal or factory broach at their discretion.

In section 12.4 of the Agreement once a communal or factory broach is installed, the system and all its associated records can be transferred at the discretion of the customer of the Dealer. The Dealer is required to provide a monthly update to the Principal with the latest information, including codes and cylinder/key additions to ensure and safeguard the factory systems integrity. This is an essential term of this Agreement.

Restricted Key System – Available ONLY Through Locksmiths

The EVVA DPS High Security Restricted Key System

THE CYLINDER

The EVVA DPS High Security Key System features include a unique pinning system using sliders which activate a control bar. In addition, broaching sidebars are used to create multi broached key systems allowing locksmiths to generate a theoretical 133 million combinations. An additional cylinder trap pin is installed to all cylinders to prevent manipulation of the sidebar broaching.

EVVA DPS has high security anti-pick, anti bump sliders made from Teflon impregnated nickel silver, which are protected by three hardened sidebar blocking pins and a key control hook pin. EVVA DPS cylinders are all made from brass, stainless steel and nickel components.

Features

- ? Teflon impregnated sliders
- ? Stainless steel control bar
- ? Multi broaching sidebars
- ? Anti pick Features
- ? Anti bump Features
- ? Three hardened steel blocking pins in all cylinders
- ? Trap pin
- ? Key control hook pin

Restricted Key System – Available ONLY Through Locksmiths

The Keys

EVVA DPS keys are manufactured from [laminated nickel silver](#) making it one of the strongest hardwearing keys on the market. The key is precisely centred by the special profile ridge structure, ensuring problem-free insertion of the DPS key. We have the option of 12 colour keyheads for easy key identification. The system has three different safeguards that protect against keys being copied or tampered with:

- ? **Organizational protection**
Keys are only made for authorised individuals with the necessary proof of legitimacy (e.g. correct signatures).
- ? **Legal protection**
the manufacturing of keys only takes place at EVVA and at EVVA -authorised Agents. Furthermore, EVVA is protected against the unauthorised manufacturing of DPS keys by means of patented features on the key.
- ? **Technical protection**
Keys have technical features that require specialised machines and specialist knowledge for their manufacture.

Software

EVVA DPS systems are generated using Promaster 5 or the Key mastery.

Legal Protection

EVVA DPS has a patented in Australia on the cylinder and the key to the year 2022 ensuring legal protection against unauthorized key manufacture. Patent protection is the strongest legal protection.

Quality Guaranteed

Confidence in our 100% guarantee on all EVVA components is due to our.

- ? **Cycle testing**
All EVVA cylinders have been cycle tested to 100,000 uses.
- ? **Environmental testing**
EVVA cylinders will operate in the most extreme of environments of between -20 degrees and 80 degrees. They meet the highest standard levels for corrosion and fire resistance.
- ? **Quality control**
EVVA'S quality control is second to none. One in every one hundred cylinders manufactured is quality control checked insuring 100% accuracy in all of our components
- ? **Latest technology**
Continues investment in manufacturing technology and environmentally friendly manufacturing.
- ? **Manufactured in Vienna**
EVVA is manufactured exclusively at our plant in Vienna, Austria.
